

PREFORMED GUY GRIP DEAD END

Preformed tension clamp also named as preformed dead end or dead end cable grips which are used on communication ADSS fiber, OPGW cable, or OPPC. The preformed dead end is one type of guy grip which has an important function on ADSS/OPGW transmission line. The dead end cable grips are designed to connect the ADSS/OPGW/OPPC to the overhead tower or pole. The unique preformed tension clamp design not only simplifies the installation but also makes sure the safety of the cable connection. The dead end cable grips offer superior performance to protect the ADSS/OPGW/OPPC cable from damage by the stress point, against signal decreasing during the transmission. The preformed tension clamp and guy wire dead end grips used on the conductor and earth wire look alike in shape, but there are really big differences in the specification, raw material, and strength requirement of the two types of guy grips.

SPECIFICATIONS

The preformed tension clamp raw materials are aluminum clad steel wire or galvanized steel wire. The galvanized steel wire preformed tension clamp is more popularly used on overseas. For different cable diameters, the preformed tension clamp length, wire number, and color mark are different. If you want to choose the right type which fits your cable specification.

The span or the distance between the two towers or poles will determine the kind of preformed tension clamp to use.

Product Specifications: Preformed tension clamp for ADSS

Code	Cable diameter (mm)	Length of the inner grip	Weight (kg)	Strength (kn)	Fiber capacity
IKUBADSSPFGGEAC=	8.1 - 9.0	740mm	0.32	10	12F – 48F
IKUBADSSPFGGEAA=	10.0 - 10.4	830mm	0.52	10	48F – 72F
IKUBADSSPFGGEAB=	10.5 - 11.0	910mm	0.54	10	96F – 144F
